

ABSTRACT OF THE DISCLOSURE

The present invention provides ~~An~~ an electro-optical device and a method of manufacturing the same capable of suppressing an influence due to an irregularity of a switching element or a wiring line on a functional element ~~is provided~~. An organic EL apparatus can include ~~includes~~ on a substrate ~~P~~ an organic EL device-200, a wiring for supplying a power to the organic EL device-200, and a switching element-143. An insulating layer ~~100~~ can be formed on the substrate ~~P~~, and a concave part is formed in the insulating layer ~~100~~ to dispose the switching element-143.
